Define the Problem Statements

Date	18 June 2026
Team ID	
Project Name	Online Complaint Register
Maximum Marks	4 Marks

Problem Context

Citizens often face challenges when trying to register complaints with local authorities. Current systems are either paper-based, slow, or fragmented across multiple departments. This leads to frustration, lack of transparency, and delayed resolutions.

Customer Perspective

- Who is the customer? Everyday citizens who want to report issues (e.g., sanitation, electricity, water supply, public safety).
- What is their problem?
 - Difficulty in submitting complaints quickly and securely.
 - No clear way to track complaint progress.
 - Lack of communication or updates from authorities.
 - Limited feedback mechanisms to ensure accountability.
- Why does it matter? Customers feel unheard and lose trust in public systems when their complaints are ignored or delayed. They want a simple, transparent, and responsive platform that values their voice.

Desired Experience

Customers want:

- A user-friendly portal to submit complaints anytime, anywhere.
- Real-time tracking of complaint status.
- Notifications/alerts when actions are taken.
- Feedback options to rate resolution quality.
- Assurance that their complaint is securely stored and acted upon.

Customer Problem Statement (Voice of the Customer)

Expression Style	Statement
I need...	I need a simple and secure way to register my complaints online without visiting offices.
I am trying...	I am trying to report issues like sanitation, electricity, or water supply, but the current process is slow and confusing.
Because...	Because there is no clear system to track my complaint status or know if anyone is working on it.
Reason...	The reason I feel frustrated is that I don't receive updates, my complaints often go unresolved, and I lose trust in the system.
