

Project Design Phase

Problem – Solution Fit Template

Date	18 June 2026
Team ID	
Project Name	Online Complaint Register
Maximum Marks	4 Marks

Proposed Solution Template:

The Online Complaint Register is a MERN-based web application designed to simplify how citizens file and track complaints. It provides a secure platform for submitting issues, monitoring progress in real time, and receiving timely updates. The solution is unique because it integrates complaint submission, agent assignment, and feedback collection into one system. By improving transparency and accountability, it enhances customer satisfaction and builds trust. With a scalable architecture, the project can expand across departments or cities, making it suitable for long-term adoption.

Proposed Solution – Online Complaint Register (MERN)

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Citizens face delays, lack of transparency, and inconvenience when registering complaints through offline or fragmented systems.
2	Idea / Solution Description	Develop a MERN-based web application that enables users to register complaints online, track their status, receive notifications, and provide feedback — all through a secure, responsive interface.
3	Novelty / Uniqueness	Integrates complaint tracking, agent assignment, and feedback collection in one unified platform. Uses real-time updates and analytics to improve resolution efficiency.
4	Social Impact / Customer Satisfaction	Enhances public trust by ensuring transparency and accountability. Citizens feel heard and empowered through faster complaint resolution and feedback mechanisms.
5	Business Model (Revenue Model)	Can be adopted by municipal bodies or service organizations as a subscription-based SaaS model. Optional premium features for analytics and automated reporting.
6	Scalability of the Solution	Easily scalable across departments, cities, or organizations. Cloud-based architecture supports high user volume and future integration with mobile apps or AI chatbots.
